

Track system
KATANA

Elegant simplicity

KATANA is a low-voltage track system that offers various options for track mounting of LED lights.

It is a preferred alternative to magnetic track systems because it retains their characteristic design, but facilitates installation and reduces the investment cost.

3 MOUNTING OPTIONS:

Recessed

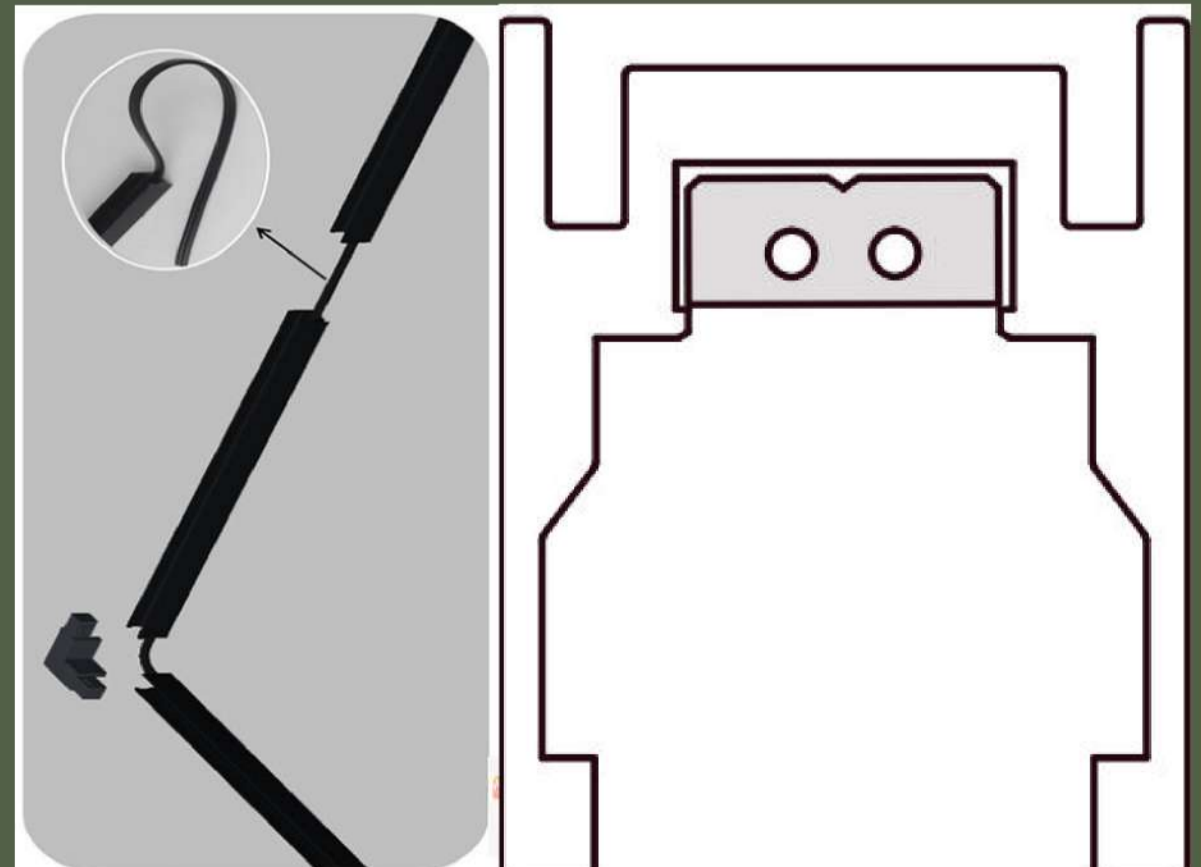

Surface

Suspended

The electrical connection of the KATANA track system is made by a flat cable that is attached to the base of the track rail.

This makes them absolutely safe and ensures an easier and faster installation.

The luminaires are fixed and powered by the cable and no current flows through the track rails and the connectors.

The KATANA system offers the possibility of extension with the flexible track system IMAGINARIUM via a connecting module.

With this opportunity the design of the installation can be further customized, or a new track route can easily be added to serve the changing needs of the room.
